

Software status

Telescope control

Online programs:

- Data acquisition (?)
- Telescope control daemon (connection server) (?)
- Database (?)

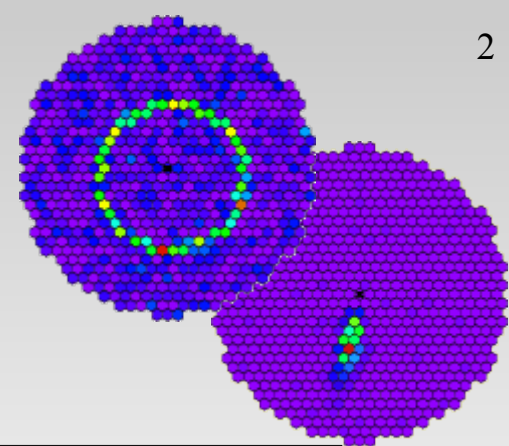

Offline programs:

- GUI for running observations (?)
- GUI for operation database access (?)

Software status

Data analysis

Simulation:

- MMCS reasonable
- Ceres almost ready but needs tuning, input and crosschecks

Analysis:

- Analysis chain should work out of the box
- The calibration will need some tuning

Automation:

- *Simulation:*
In construction
- *Analysis (callisto, star, ganymed):*
Running in Würzburg (will need some adaption to support more than one telescope (almost ready for M2))
- *Automatic spectrum and lightcurve:*
In construction (data to be filled in a database)
- *Telescope operation:*
